

Hi Julie-

Attached is a comment letter on behalf of the California State-wide Codes and Standards Team representing 35 million California utility ratepayers. We appreciate DWR's efforts to respond to the drought emergency, including improved implementation of the MWELO. We recommend adding specific requirements to the landscape irrigation system and controllers audit requirement in the MWELO. We also recommend working with the CEC on their planned Title 20 landscape irrigation controller appliance efficiency standard.

Please feel free to contact me with any questions (note that I will be out June 29 and 30th, and you can contact Heidi Hauenstein at x219 with any urgent questions during that time).

Best,
Ed
